Combining functionality that brings together **TRAFFIC VISIBILITY**, **WEB ENFORCEMENT**, **BANDWIDTH SHAPING** and network **THREAT CONTAINMENT** in one appliance, Cymtec Sentry delivers all of the tools necessary to better manage, remotely troubleshoot and optimize performance for multi-site networks.

Cymtec Sentry Features:

Traffic Visibility—Cymtec Sentry allows for real-time traffic and bandwidth consumption analysis, accessed locally through an appliance in remote and branch offices without the need to pull large amounts of management data back to headquarters across the network.

Web Enforcement/User Control—this feature includes enterprise-class URL/web filtering through the McAfee SmartFilter Enterprise Engine, as well as centralized control over bandwidth intensive applications, Instant Messaging, P2P/file sharing, iTunes®, web mail and many more.

Bandwidth Shaping—location-specific prioritization and allocation of bandwidth, ensures critical traffic and applications the service they need to perform. Acting as a surgical tool to compliment the traditional QoS on the WAN layer and WAN acceleration, Cymtec Sentry combines both optimization of the local traffic with the visibility necessary to ensure that the rules are having the desired results.

Network Threat Containment—utilizing the Webroot SpySweeper engine to scan all inbound/outbound traffic, Cymtec Sentry isolates propagating threats such as Spyware, malware, BotNet and worm activity, especially in office-to-office infection scenarios. Cymtec Sentry focuses on mitigating risk, complementing traditional security layers such as firewall, UTM, anti-virus and others,
